

(Once Amended) 61. An electronic gaming unit for allowing a user to play a video gaming game selected from the group of video games consisting of video poker, video slots, video blackjack, video bingo and video keno, the electronic gaming unit comprising:

a display unit that is capable of generating color images;

a currency-accepting mechanism that is capable of allowing the user to deposit a medium of currency;

a user input device comprising a virtual object, said virtual object being shaped like an object; and

a controller operatively coupled to the display unit, the currency-accepting mechanism and the virtual object, the controller comprising a processor and a memory operatively coupled to the processor,

the controller being programmed to allow the user to make a wager after the currency-accepting mechanism detects deposit of currency by the user;

the controller being programmed to cause a sequence of video images to be generated on the display unit after the currency-accepting mechanism detects deposit of currency by the user, the sequence of video images representing a video game selected from the group of video games consisting of video poker, video slots, video blackjack, video bingo and video keno,

at least one of the images comprising an image of at least three playing cards if the video game is video poker;

at least one of the images comprising an image of a plurality of simulated slot machine reels if the video game is video slots;

at least one of the images comprising an image of a plurality of playing cards if the video game is video blackjack;

at least one of the images comprising an image of a bingo grid if the

video game is bingo; and

at least one of the images comprising an image of a keno grid if the video game is keno;

the controller being programmed to cause a portion of the said images to be highlighted in response to the user pointing the virtual object at the portion of said images;

the controller being programmed to cause the virtual object to provide feedback to the user through the virtual object when a selectable item is selected; and

the controller being programmed to determine, after the sequence of images has been displayed, an outcome of the video game represented by the sequence of images and to determine a currency payout associated with the outcome of the video game.

---

(Once Amended) 77. An electronic gaming unit for allowing a user to play a video gambling game selected from the group of video games consisting of video poker, video slots, video blackjack, video bingo and video keno, the electronic gaming unit comprising:

a display unit that is capable of generating color images;

a currency-accepting mechanism that is capable of allowing the user to deposit a medium of currency;

a user input device comprising a virtual object, said virtual object being shaped like an object; and

a controller operatively coupled to the display unit, the currency-accepting mechanism and the virtual object, the controller comprising a processor and a memory operatively coupled to the processor,

the controller being programmed to allow the user to make a wager after the currency-accepting mechanism detects deposit of currency by the user;

the controller being programmed to cause a sequence of video images to be generated on the display unit after the currency-accepting mechanism detects deposit of currency by the user, the sequence of video images representing a video game selected from the group of video games consisting of video poker, video slots, video blackjack, video bingo and video keno,

at least one of the images comprising an image of at least three playing cards if the video game is video poker;

at least one of the images comprising an image of a plurality of simulated slot machine reels if the video game is video slots;

at least one of the images comprising an image of a plurality of playing cards if the video game is video blackjack;

BV at least one of the images comprising an image of a bingo grid if the video game is bingo; and

at least one of the images comprising an image of a keno grid if the video game is keno;

the controller being programmed to cause a portion of the said images to be highlighted in response to the user pointing the virtual object at the portion of said images;

the controller being programmed to cause a selectable item to be selected in response to a user pointing the virtual object at the selectable item and selecting the item;

the controller being programmed to cause the virtual object to provide feedback to the user through the virtual object when a selectable item is selected; and

the controller being programmed to determine, after the sequence of images has been displayed, an outcome of the video game represented by the sequence of images and to determine a currency payout associated with the outcome of the video game.

(Once Amended) 92. An electronic gaming unit for allowing a user to play a video game selected from the group of video games consisting of video poker, video slots, video blackjack, video bingo and video keno, the electronic gaming unit comprising:

a display unit that is capable of generating color images;

a currency-accepting mechanism that is capable of allowing the user to deposit a medium of currency;

a user input device comprising a virtual object, said virtual object being shaped like an object; and

a controller operatively coupled to the display unit, the currency-accepting mechanism and the virtual object, the controller comprising a processor and a memory operatively coupled to the processor,

the controller being programmed to allow the user to make a wager via the input device after the currency-accepting mechanism detects deposit of currency by the user;

the controller being programmed to cause a sequence of video images to be generated on the display unit after the currency-accepting mechanism detects deposit of currency by the user, the sequence of video images representing a video game selected from the group of video games consisting of video poker, video slots, video blackjack, video bingo and video keno,

at least one of the images comprising an image of at least three playing cards if the video game is video poker;

at least one of the images comprising an image of a plurality of simulated slot machine reels if the video game is video slots;

at least one of the images comprising an image of a plurality of playing cards if the video game is video blackjack;

at least one of the images comprising an image of a bingo grid if the video game is bingo; and

at least one of the images comprising an image of a keno grid if the video game is keno;

the controller being programmed to cause one of the said images to be modified in response to the user pointing the virtual object at a portion of the display device;

the controller being programmed to cause a selectable item to be selected in response to a user pointing the virtual object at the selectable item and selecting the object;

B3 the controller being programmed to cause a set of cross-hairs to be displayed on the portion of the images in response to the user pointing the virtual object at the portion of said images;

the controller being programmed to cause the virtual object to provide feedback to the user through the virtual object when a selectable item is selected; and

the controller being programmed to determine, after the sequence of images has been displayed, an outcome of the video game represented by the sequence of images and to determine a currency payout associated with the outcome of the video game.

---

(Once Amended) 106. An electronic gaming unit for allowing a user to play a video game selected from the group of video games consisting of video poker, video slots, video blackjack, video bingo and video keno, the electronic gaming unit comprising:

a display unit that is capable of generating color images;

a currency-accepting mechanism that is capable of allowing the user to deposit a medium of currency;

a user input device comprising a virtual object, said virtual object being shaped like an object; and

a controller operatively coupled to the display unit, the currency-accepting mechanism and the virtual object, the controller comprising a processor and a memory operatively coupled to the processor,

the controller being programmed to allow the user to make a wager via the input device after the currency-accepting mechanism detects deposit of currency by the user;

34 the controller being programmed to cause a sequence of video images to be generated on the display unit after the currency-accepting mechanism detects deposit of currency by the user, the sequence of video images representing a video gambling game selected from the group of video games consisting of video poker, video slots, video blackjack, video bingo and video keno,

at least one of the images comprising an image of at least three playing cards if the video game is video poker;

at least one of the images comprising an image of a plurality of simulated slot machine reels if the video game is video slots;

at least one of the images comprising an image of a plurality of playing cards if the video game is video blackjack;

at least one of the images comprising an image of a bingo grid if the video game is bingo; and

at least one of the images comprising an image of a keno grid if the video game is keno;

the controller being programmed to cause a portion of the said images to be highlighted in response to the user pointing the virtual object at the portion of said images;

the controller being programmed to cause a selectable item to be selectable in response to a user pointing the virtual object at the selectable item and selecting the item;

the controller being programmed to cause a set of cross-hairs to be displayed on the portion of the images in response to the user pointing the virtual object at the portion of said images;

By the controller being programmed to cause the virtual object to provide feedback to the user through the virtual object when a selectable item is selected;

the controller being programmed to determine, after the sequence of images has been displayed, an outcome of the video game represented by the sequence of images and to determine a currency payout associated with the outcome of the video game; and

a selection switch operatively coupled to the virtual object, wherein the controller is programmed to cause a virtual indicator to be displayed on a portion of one of the images in response to the user selecting the selectable item while the virtual object is pointed at the portion of the one image.

---

(Once Amended) 111. The electronic gaming unit of claim 106, wherein the virtual object is a virtual magic wand shaped like a magic wand where a portion of the virtual magic wand illuminates or provides motion as feedback when the selectable item is selected by the user.

(Once Amended) 112. The electronic gaming unit of claim 106, wherein the virtual object is a virtual remote control shaped like a remote control where a portion of the virtual remote control illuminates or provides motion as feedback when the selectable item is selected by the user.

(Once Amended) 113. The electronic gaming unit of claim 106, wherein the virtual object is a virtual pointing helmet shaped like a pointing helmet where a portion of the virtual pointing helmet illuminates or provides motion as feedback when the selectable item is selected by the user.

35 (Once Amended) 114. The electronic gaming unit of claim 106, wherein the virtual object is a set of virtual goggles shaped like a set of goggles where a portion of the virtual goggles illuminates or provides motion as feedback when the selectable item is selected by the user.

(Once Amended) 115. The electronic gaming unit of claim 106, wherein the virtual object is a virtual pointing glove shaped like a pointing glove where a portion of the virtual glove illuminates or provides motion as feedback when the selectable item is selected by the user.

(Once Amended) 116. The electronic gaming unit of claim 106, wherein the virtual object is a virtual gun shaped like a firearm and having a portion shaped like a trigger where a portion of the virtual gun illuminates or provides motion as feedback when the selectable item is selected by the user.
